

Layer 1

Underlying epidemic and patient factors

Epidemic wave context
(epidemic intensity, variant period)

Patient risk factors
(age, comorbidity, vaccination, RCHE residence)

Underlying disease severity

Layer 2

Hospital-system processes

Admission selection / admission thresholds

Hospital load / system pressure

Layer 3

Hospitalized cohort and outcome

Hospitalized cohort / admitted severity mix

Quality of in-hospital care

In-hospital death

Observed hospital fatality risk (HFR)
